Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 February 2004.
2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Objections

Claim 26 is objected to because of the following informalities: line 12 should be modified to read, "while the selected at least one sewing pattern is in use." Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshida (5,333,560). Yoshida discloses an overlock sewing machine, comprising: a main body (1); a needle bar (4) mounted to reciprocate in an axial direction; plural needles (5) positioned at the needle bar; a main feeding mechanism (col. 3, lines 3-6) to control a cloth feeding amount of a main feed dog; a differential feeding mechanism (col. 3, lines 37-40) adjusted to control a cloth feeding amount of a differential feed dog; a memorizing device (24) configured to memorize at least one sewing pattern, the memorizing device being provided at the main body; a pattern selecting device (fig. 5) provided at the main body and configured to select the at least one sewing pattern memorized in the memorizing device; and a control device provided at the main body and configured to control the selected at least one sewing pattern (col. 3, lines 55-61).

Allowable Subject Matter

Claims 7-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 13-33 are allowed.

The following is an examiner's statement of reasons for allowance: claim 7 specifically requires that the intermittent gathering pattern be performed by repeatedly changing the feeding amount of the differential feed dog relative to the feeding amount of the main feed dog based on an intended number of stitches. Claim 8 specifically requires that the finishing pattern be performed by substantially simultaneously minimizing feeding amounts of the main feed dog and the differential feed dog based on an intended number of stitches. Claims 9-12 specifically require that the pattern-selecting device include a first operating portion operated for initiating the intermittent gathering pattern, and a second operating portion operated for initiating the finishing pattern. Claims 13-23 specifically require that the at least one sewing pattern including an intermittent gathering pattern and a finishing pattern, the intermittent pattern being performed by repeatedly changing the feeding amount of the differential feed dog relative to the feeding amount of the main feed dog based on an interval of an intended number of stitches, and the finishing pattern being performed by substantially simultaneously minimizing feeding amounts of the main feed dog and the differential feed dog based on an intended number of stitches. Claims 24-25 specifically require transitioning to the second sewing pattern while the first sewing pattern is in use.

Art Unit: 3765

Claims 26-33 specifically require that the selected at least one sewing pattern be changed to a second sewing pattern while the at least one sewing pattern is in use.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bergvall (4,422,394) discloses seam pattern selecting switches and a control system to produce the patterns. Reina et al. (6,467,418) discloses a overlock sewing machine.
